DURING THE RECENT RESTORATION OF THE MASONRY FACADE, IT WAS DISCOVERED THAT A CRACK ALONG THE SOUTHERN COURTYARD WALL EXTENDING OVER 3 FLOORS WAS CAUSED BY A LEAK IN AN OLD STEAM PIPE WHICH WAS LOCATED INSIDE THE WALL. THE PIPE HAD BEEN LEAKING INSIDE THE WALL AND CORRODED THE COLUMN AND DETERIORATED THE GROUT AND MORTAR HOLDING THE BRICK BACKUP WALL TOGETHER.

2013 - COURTYARD SOUTH FACADE RESTORATION

EXISTING BOILER SYSTEM

THE EXISTING STEAM HEATING SYSTEM CONSISTS OF TWO GAS FIRED BOILERS LOCATED IN SUB–CELLAR. THE STEAM DISTRIBUTION CONSISTS OF A TWO–PIPE SYSTEM AND FEATURES A VACUUM PUMP ON THE CONDENSATE RETURN. THE HEATING SYSTEM STEAM RISERS ARE ALL EMBEDDED WITHIN BUILDING ENVELOPE AROUND THE PERIMETER. THE STEAM AND CONDENSATE PIPING RISERS IN THE BUILDING ARE MOSTLY ORIGINAL AND OVER A CENTURY OLD; HAVE SCALING AND CORROSION AND ARE PAST IT'S USEFUL LIFE. AS IS TYPICAL OF MANY STEAM SYSTEMS THERE ARE ALSO PROBLEMS WITH DISTRIBUTION OF STEAM, KNOCKING AND HAMMERING AND CONTROL OF HEATING WITH LACK OF HEATING.

THE BELNORD HAS BEEN HAVING ISSUES WITH THE CENTURY OLD STEAM SYSTEM THAT IS ORIGINAL TO THE BUILDING. THE EXISTING PIPES, WHICH RUN INSIDE THE WALLS AND FLOORS OF THE BUILDING, HAVE STARTED TO DETERIORATE AND HAVE BEEN CAUSING LEAKS THROUGHOUT THE BUILDING. THE REPAIR OR REPLACEMENT OF THESE EXISTING PIPES WOULD BE INVASION AND DETRIMENTAL TO THE BUILDING AS IT WOULD CONSIST OF BREAKING AND REMOVING WALLS, FLOORS, AND STRUCTURE THROUGHOUT. IN THE PAST YEAR, FOUR LEAKS HAVE OCCURRED DUE TO DETERIORATED AND BROKEN STEAM PIPES. THRU INFRA RED INVESTIGATION, IT WAS FOUND THAT THE STEAM PIPES IN THE FLOOR WERE LEAKING.

PHOTO #4: Elevator #3

- Moisture test was performed at the floor and yielded positive results.

PHOTO #5: Elevator #3

THE EXISTING COOLING TOWERS ARE SITUATED AT LOCATIONS WHERE THEY ARE MINIMAL TO NONE VISIBLE FROM THE PUBLIC THOROUGHFARE. THEY ARE PLACED ON TOP OF STEEL DUNNAGE AND HAVE PIPES AND CABLES ALREADY LAID OUT ON THE ROOF. THESE TOWERS ARE LARGER THAN THE PROPOSED BOILERS. THESE TOWERS ARE ALMOST IMPOSSIBLE TO RELOCATE WITHOUT EXTENSIVE MODIFICATION TO THE BUILDING STRUCTURE, ROOF, AND EXISTING MECHANICAL INFRASTRUCTURE. EVEN IF THE TOWERS COULD BE MOVED, THEY ARE TALLER AND BIGGER THAN THE PROPOSED BOILERS AND WILL BE MORE VISIBLE FROM THE PUBLIC THOROUGHFARE. WITH ALL THE SKYLIGHTS, ELEVATOR BULKHEADS, EXISTING PIPING, AND CHIMNEY, THERE IS NO LOCATION LARGE ENOUGH TO ACCOMMODATE BOTH THE COOLING TOWER AND THE BOILERS IN A PLACE THAT THEY WILL BE NOT VISIBLE FROM THE STREET OR LESS VISIBLE THAN THE PROPOSED NEW BOILER.

BUILDING DEPARTMENT NOTES - HVAC

NYC BUILDING DEPT. NOTES

GENERAL NOTES

1. ALL WORK AND COMPONENTS SHOWN ON THESE PLANS COMPLY WITH THE NEW YORK BUILDING LAWS (LL 33/2008) AS AMENDED TO THIS DATE.
2. NEW YORK STATE ENERGY CONSERVATION RULES AND REGULATIONS HAVE BEEN FOLLOWED.

SPECIAL INSPECTIONS - MECHANICAL

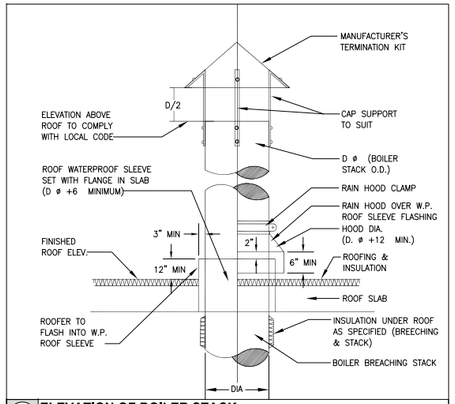
THE FOLLOWING SPECIAL INSPECTIONS ARE REQUIRED AS DESCRIBED IN THE NEW YORK CITY 2014 BUILDING CODE:

SPECIAL INSPECTIONS:

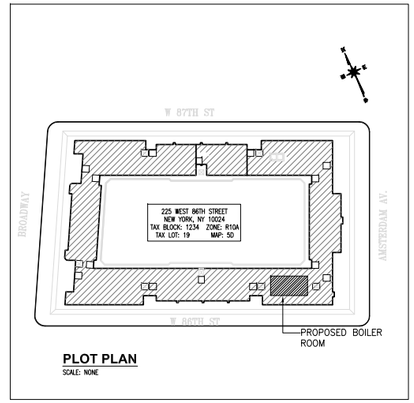
HEATING SYSTEMS	BC 1704.25
CHIMNEYS	BC 1704.26
FIRESTOPS	BC 1704.27

ENERGY COMPLIANCE STATEMENT

TO THE BEST OF MY KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGEMENT, THIS APPLICATION IS IN COMPLIANCE WITH ASHRAE 2010 90.1.



1 **ELEVATION OF BOILER STACK**



PLOT PLAN
SCALE: NONE

BOILER ROOM NOTES:

1. THE DOOR SHALL BE 1½ HR FIRE RATED SELF-CLOSING DOOR. DOOR SHALL SWING OUTWARDS FROM BOILER ROOM.
2. BOILER ROOM FLOOR IS CONCRETE SLAB ON GRADE NON-COMBUSTIBLE CONSTRUCTION FOR COMPLIANCE WITH MC1004.5.
3. BOILERS ARE HOT WATER PACKAGE HEATING BOILERS WITHOUT MANHOLE ON TOP. INPUT OF 600,000BTU/H EACH. THE CLEARANCE ABOVE BOILER SHALL BE 2FT. MIN. FOR COMPLIANCE WITH MC. 1004.3.1.
4. COMBUSTION AIR SHALL BE PROVIDED FOR DIRECT COMBUSTION AIR CONNECTION TO OUTDOOR IN ACCORDANCE WITH MC707 AND FGC 304.11.
5. THE BOILER IS GAS FIRED DIRECT VENT CONDENSING TYPE. THE VENTING SHALL BE PROVIDED IN ACCORDANCE WITH FGC SEC.503.2.2. AND FGC SEC. 503.8.
6. PROVIDE VIBRATION ISOLATION FOR BOILERS, MC.1004.4. PROVIDE SIESMIC RESTRAINT.
7. PROVIDE PRIMARY AND SECONDARY LOW WATER CUT-OFF FOR EACH BOILER WIRED TO STOP COMBUSTION OPERATION WHEN WATER LEVEL DROPS BELOW SAFE LEVEL ESTABLISHED BY MFR.

WIRE LEGEND

- Typ. 18 AWG Low Votage (24 VAC) Wire
- Typ. 18 AWG 0-10 VDC Control Signal Wire
- Typ. Level 4 Echelon Approved Network Communication Wire (WR-022)
- Typ. 18 AWG SHIELDED Sensor Wire (WR-018)
- Typ. 18 AWG Wire
- Typ. Line Voltage Wire
- Typ. BACnet IP Network Communication Wire
- Typ. Ethernet Cable
- Typ. Modbus Network Communication Wire

NOTES:
- All iWorx controller MUST be properly grounded.
- iWorx controller power source (transformer) MUST also be properly grounded.
- All 18 AWG shielded cable wiring used for sensor(s) MUST be properly grounded.
- Controller jumper placements must be configured PRIOR to installing power.
- Network communication wire MUST be 22 AWG Echelon approved Level 4 wire (WIR-022)
- Maximum iWorx LON communication wire (WIR-022) length: 1,640 feet.
- Should project requirements exceed the maximum total network wire limitations, a LON signal repeater will be required
- Port(s) 11000 & 11001 must be forwarded by the building IT manager for remote access.
- Typical ethernet cables, router and network hardware BY OTHERS.
- GCI gateway integration MUST be performed by a Niagara AX certified proffessional.
- The installer MUST review all iWorx product installation and application manuals prior to installation of material(s)
