

GENERAL NOTES:

- ALL DUCTWORK SERVING FANS (EXCEPT DRYER EXHAUST DUCTWORK) AND/OR HVAC UNITS ON ROOF OR MEW ARE TO BE ACoustically LINED ON THAT FLOOR.
- PROVIDE 2 HR FIRE WRAP AS INDICATED.
- MAU-15-1 & MAU-15-2

- OUTSIDE AIR INTAKE DUCT - 10 FEET OF INTERNAL LINING FROM UNIT
- 15 FEET INTERNAL LINING ON SUPPLY

DIESEL PARTICULATE FILTER (DPF) NOTES:

(8) 12" DIAMETER X 12" LONG CATALYZED, WALL-FLOW, PASSIVE DIESEL PARTICULATE FILTER ELEMENTS ALL ARRANGED IN A (2) HIGH X (4) WIDE ARRAY DESIGNED FOR USE ONLY ON AN MTU/ON SITE ENERGY 16V2000 1250KW GENERATOR (PROVIDED BY ALTERNATE POWER GENERATION CONTACT ZACH NEWROFF 808-963-1374) RUNNING AT FULL LOAD. ENGINE EXHAUST IS DIRECTED ACROSS THESE DPF ELEMENTS WITHIN A CUSTOM BUILT 304 SERIES STAINLESS STEEL HOUSING. THE OVERALL HOUSING SIZE CANNOT EXCEED LARGER THAN 80"0" LONG, 80"0" WIDE, AND 36"50" TALL. THIS HOUSING MUST INCORPORATE AN INTERNALLY INSULATED SILENCER SECTION TO ACHIEVE CRITICAL GRADE SOUND ATTENUATION OF 25-32DB(A) AT A BACKPRESSURE NO GREATER THAN 60% OF THE ENGINE MANUFACTURERS MAXIMUM ALLOWABLE BACKPRESSURE.

THE CATALYZED DPF ELEMENTS ESSENTIALLY FILTER OUT UNBURNED CARBON PARTICLES OR SOOT, THAT OCCURS IN THE DIESEL ENGINE EXHAUST, ESPECIALLY UNDER COLD START UP CONDITIONS. THE DPF'S WILL CAPTURE 95%+ OF THESE CARBON PARTICLES, OF A SPECIFIED SIZE, TO THEIR OVERALL CAPACITY. THESE CARBON PARTICLES, OR OFTEN CALLED PARTICULATE MATTER (PM), NEED TO BE REMOVED FROM THE DPF'S. THIS IS ACCOMPLISHED BY THE CATALYZED COATING ON THE DPF ELEMENTS REACHING A "LIGHT OFF" TEMPERATURE, DRIVEN BY THE EXHAUST GAS TEMPERATURE. ONCE THIS LIGHT OFF TEMPERATURE IS ACHIEVED, THE DPF WILL OPERATE IN A CONDITION CALLED CONTINUOUS REGENERATION. CONTINUOUS REGENERATION WILL BURN OFF THE CARBON PARTICLES TRAPPED WITHIN THE DPF ELEMENTS AS LONG AS THE LIGHT OFF TEMPERATURE IS SUSTAINED.

CARBON PARTICLES WILL BUILD UP IN THE DPF ELEMENTS AND WILL INCREASE BACKPRESSURE IN THE EXHAUST. TO HELP MANAGE THIS, A DIFFERENTIAL PRESSURE SWITCH AND MONITORING DEVICE IS RECOMMENDED TO BE UTILIZED IN A PASSIVE DPF SYSTEM TO ALERT THE OPERATOR, OR TO TRIGGER AN ALARM IF A SPECIFIED LIMIT OF BACK PRESSURE HAS BEEN REACHED. WHEN THAT OCCURS, SUFFICIENT LOAD MUST BE APPLIED TO THE ENGINE IN ORDER TO REACH AND MAINTAIN THE LIGHT OFF TEMPERATURE OF THE DPF'S.
